

S30 Sausage Foils

- **Extremely easy to clean up**
- **Coverage is 30-60 sq ft glue assist**
- **No mess**
- **Same as forteko trowel glue t200**
- **Extreme holding power**
- **Great for engineered & Solid wood**

Product Description

S30 is an easy-to-use, silane-based adhesive with the same formula as the T200. In glue-assist applications, it covers 30–60 sq. ft., while a full trowel application covers 9–10 sq. ft. The bond strength is exceptional, making it ideal for glue-assist installations with both solid and engineered hardwood. S30 can handle up to 24" wide engineered planks and 18" wide solid hardwood. It is compatible with all common substrates, including OSB and concrete.

Application

1. Insert the Forteko sausage into the sausage gun.
2. Pump the gun 2–3 times so the sausage rises about ½" above the gun top.
3. Puncture the sausage once at the top.
4. Release the gun so the sausage drops back into place.
5. Attach the tip to the top and secure the ring over it.
6. Once tightened, pump the gun a few times until glue appears at the base.
7. Cut the tip to your desired size and begin applying adhesive to the floor.
8. Use either a wave or strip pattern for glue-assist applications.

Specifications

Base	One-component adhesive silane-modified Polymer free of solvents
Color	Tan
Odor	None / 0 VOC
Working Time	60 minutes (depending on humidity)
Cure	24 Hours
Sanding Possible	12–18 Hours
Sound Reduction	STC up to 61

Cleaning Agent	While still wet use mineral spirits on a clean white cloth or other specific products
Shelf Life	12 months in unopened container at 70°F / 21°C, not below 40°F / 5°C
Freeze/thaw Stable	Yes
Unit Size	1 Sausage
